Irrigating Australia

Whether you need to save water, ensure consistent turf growth, have an urgent repair or need a spare part, Water Dynamics delivers expert irrigation solutions.

Irrigation is vital to sustain plant growth in Australia and getting the optimal supply of water to your turf affects the playing surface. Trust the experts at Water Dynamics to place as much value on irrigating your turf and plants as you do. Our range of sprinkler systems, products and services will help you get the most of your open space.

Turf Irrigation

Your local Water Dynamics team will help you maximise the benefits of irrigation, helping increase turf and plant growth while minimising water waste.

Our range of irrigation systems includes:

- Pop-up sprinkler systems
- Micro systems
- Drip systems
- Solid set sprinkler systems
- Moveable sprinkler systems
- Fertigation systems
- Travelling irrigation systems

Products and Spare Parts

Water Dynamics have what you need when you need it, with a product range designed to cater to turf and landscape irrigation, and overnight delivery from most stores.

Our range of products and spare parts include:

- Sprinklers
- Filters
- Controllers
- Valves
- PVC pipe
- Poly pipe
- Pumps
- Driplines

System Design, Installation, Service and Repairs

From hands on training of a new piece of equipment, to routine maintenance or emergency field repairs, our qualified technicians are always available to keep your system working the way it should.

Irrigation System Design

Whether it's a world class golf course or even your own backyard, Water Dynamics' irrigation experts design and supply customised irrigation systems for irrigation upgrades, overhauls and expansions. We consider factors including soil types, climate, water source, water emission rate, as well as your individual priorities in designing a system suited to your needs.

We ensure your system can handle the demands of the peak irrigation season while also supplying the reduced levels of water required at other times.

Installation

It is critical that your irrigation system is installed correctly by skilled installers in accordance with various standards. This will ensure the system performs optimally and in part determines the expected life of the system.

System flushing, pre-commissioning, system start up and training are key to a successful installation. Water Dynamics' technicians are highly skilled and knowledgeable, and have a history of successful installations from small applications to large operations.

Maintenance, Service and Repair

Maintenance on your entire water supply system at the end of the irrigating season is vital in preventing unplanned breakdowns and water loss during the next irrigating season. Water Dynamics provides preventative maintenance programs to ensure your water is ready when and where you need it.

We offer a complete repair and service facility, so regardless of the make or model of your equipment, our branches have the capability to help you.

Where unplanned breakdowns or unwanted water stress on your turf or plants occur, Water Dynamics has irrigation professionals and fully stocked service vehicles ready to help.

Irrigation Solutions

Water Dynamics offer a range of irrigation solutions that will help you boost yields, while using less water. Whether you run a large scale commercial farm or small hobby venture, if you're a home owner or look after a commercial open space, grow broad-acre or horticultural crops or rear livestock, we will customise an irrigation solution that is finely tuned to your needs and budget.

Our irrigation experts will take into account your topography, available water resources, crop/livestock type, growing media, lifestyle choices and climatic conditions to optimise your system for water efficiency.

Drip Irrigation

Reduce your water usage by delivering water and nutrients directly to the root-zone, minimise evaporation and improve efficiency.

Broadacre Irrigation

Whether it is centre pivots, linear or hose irrigators, get the right broad-acre irrigation system based on your unique topography and soil conditions.

Stock Watering

Conserve water and spread grazing pressure with stock water system that combines effective storage, reticulation and pumping.

Sprinklers

Maximise the benefits of sprinkler irrigation on crops or turf while reducing water waste.

Micro Irrigation

Precisely water plants in greenhouses, nurseries, orchards and landscape areas. Our team can help you with every stage of your irrigation planning and implementation. We'll conduct a detailed site audit, supply the right equipment to meet your needs, install your equipment according to exacting standards to ensure performance and longevity, train your staff and look after your maintenance needs into the future.

Call us today on 03 5743 8900 to speak to our experienced staff and find out how we can optimise water use on your property.
